

Don't let the flu get you down

It's never fun to be sick, but the flu is more serious than the common cold. It can be dangerous – especially for older people, children under 4, and pregnant women. Protect yourself and the people you care about with these simple tips.

Get your flu shot

It's your best defense. The vaccination can't give you the flu – but it can help protect you against this year's most common strains and prevent spreading the flu to others. Don't get the flu – get the flu shot!

Boost immunity with healthy habits

Simple things that support overall health can also help you fight the flu. Wash your hands often, and keep hand sanitizer handy. Make sure to get enough sleep, eat lots of fruits and veggies, and drink plenty of water.

Keep your germs to yourself

If you do get the flu, do yourself and your coworkers a favor and stay home. You need rest, fluids, and time to recover – and going to work sick can make symptoms worse and spread the illness around your workplace.
